

## Introducing the Echotec RTS 300

The Echotec RTS 300 offers further versatility into the already adaptable shear. Manufactured from HARDOX® and STRENX™ the shear offers continuous 360 degree rotation powered by an Hydraulic Worm Drive. This enhances performance for limbing, hedge row maintenance, tree removal, site clearance, loading, gathering and much more. The shear is robust, dominant and durable while offering maximum production and efficiency every time it is used.

The shear has powerful twin arms securing the load in every cut making the shear safe for use in all environments.

The shear comes with a custom-made Hydraulic cylinder which offers the force behind every cut.

**Weight**  
750 kg

**Machine size**  
10 - 16 T

**Maximum cut**  
diameter 30 cm

Working Pressure	300 bar
Oil flow	75-90 litres/min
Grapple opening	1400 mm
Hardwood cut diameter	250 mm
Softwood cut diameter	300 mm

The removable blade allows the shear to be further adapted into a rotating grapple for other uses.
